

Recommendation: Kim Bell

Senior Software Development Engineer in Test (SDET)

Kim is a fantastic SDET. Clear, confident communicator who leads across engineering and QA teams without losing touch with the code itself. I would highly recommend for full stack QA reqs.

But don't just take my word for it:

Natalie Brennan — Senior Engineer, Ally Financial

"Kim is fantastic. Great communication and a strong resource. Highly recommend."

LinkedIn: <https://www.linkedin.com/in/natalie-m-brennan/>

Tyler Morrison — Senior Engineering Manager, Greenhouse (former manager at Ally Financial)

"Kim is incredibly talented and passionate. Worth connecting with."

LinkedIn: <https://www.linkedin.com/in/tyler-a-morrison/?skipRedirect=true>

Ryan Anderson — COO & Engineering Manager, LoopQA — interviewed Kim and reviewed her technical assessment

"Sharp talent."

LinkedIn: <https://www.linkedin.com/in/ryan-anderson-084ba65/>

Technical Assessment

Kim recently completed LoopQA's Playwright technical assessment with flying colors, building a scalable, data-driven test suite using the Page Object Model, JSON-based test data, and TypeScript enums for type-safe parameterization.

 Playwright Tests passing

Loop Playwright

A test-only repository for Playwright end-to-end testing with comprehensive tooling setup. Optimized for scalability, it uses data-driven methods like POM, JSON, and TypeScript types (interfaces and enums).

Tools Used

This project uses the following tools for development and testing:

- [Playwright](#) - End-to-end testing framework for web applications
- [TypeScript](#) - Type-safe JavaScript with static type checking
- [ESLint](#) - Code linting and static analysis for JavaScript/TypeScript
- [Prettier](#) - Opinionated code formatter for consistent code style
- [Husky](#) - Git hooks to enforce quality checks before commits
- [lint-staged](#) - Run linters on staged files in git
